Professional Summary

Experienced Senior Software Engineer with around 5 years of expertise in developing scalable web applications and backend systems. Proficient in Node.js, Ruby on Rails, and Python, with a strong focus on RESTful API development, real-time communication systems, and microservices architecture. Adept at collaborating with cross-functional teams, mentoring peers, and delivering high-quality software solutions aligned with business goals.

Skills

- **Programming Languages & Frameworks:** Node.js, Ruby on Rails, Python, JavaScript, React JS, jQuery, Frappe, ERPNext
- **Database Technologies:** PostgreSQL, MySQL, MongoDB, Redis
- **Development Practices:** RESTful APIs, Test-Driven Development (TDD), Microservices Architecture
- **Tools & Platforms:** Docker, Socket.io, JIRA, Trello, GitHub, GitLab, Bitbucket

Work Experience

Invzone Pvt. Ltd - *Software Engineer*

01/2022-Present

Project: Certifi App

- Improved front/back image detection accuracy using OpenCV (contours, morphology, HoughLines).
- Refactored file processing pipeline: switched to AWS SQS and concurrency control to prevent Lambda timeouts and DB exhaustion.
- Added failure isolation: logged per-file errors and prevented batch failures from single-file issues.

Project: TikTok Keyword & Bookmark Scraper

- Developed and maintained Python scripts to automate data extraction from TikTok, including user, video, and music metadata.
- Enhanced feature set by implementing new scraping modules and optimizing data filtering, deduplication, and geo-location logic.
- Resolved critical bugs to improve reliability and accuracy of data collection and analysis.
- Collaborated on growth analytics and database integration for scalable sourcing workflows.

Project: Invonext ERP Customization (Frappe/ERPNext)

- Customized Frappe/ERPNext modules for HR, payroll, and project management.
- Built API endpoints and webhooks for data sync with external systems.
- Developed scripts and UI components to improve user workflows.
- Delivered tailored ERP features for business needs.

Project: Sqrri Game

- Designed and developed the backend system from scratch, showcasing advanced technical skills.

- Implemented real-time chat functionality using Socket.io for enhanced user interaction.
- Collaborated with front-end teams to ensure seamless integration and user experience.

Project: Invohub

- Designed and implemented scalable backend architecture for a project management platform.
- Worked on developing key modules for team collaboration.
- Conducted code reviews and optimized system performance.

Project: Invoteams

- Architected and implemented a microservices-based backend for a comprehensive team collaboration platform.
- Integrated advanced task management and user notification systems to enhance productivity.
- Conducted thorough code reviews, ensuring high-quality code aligned with best practices.
- Presented stakeholder demos, effectively communicating progress and features.
- Led technical discussions and collaborated with stakeholders to align features with business objectives.

Project: Ragewar

- Contributed to feature development for a strategy-based game application.
- Performed server health checks and resolved system anomalies.
- Presented technical demos to stakeholders and addressed feedback effectively.

Project: InvoProjects

- Developed a Trello-like kanban board plugin for task management with intuitive drag-and-drop interfaces.
- Created a Mattermost plugin for automated ticket generation, improving operational efficiency.
- Ensured high-quality code through thorough reviews and best practices.
- Maintained robust backend systems using Ruby on Rails and PostgreSQL.

Code District - Associate Software Engineer

11/2020-01/2022

Project: Swatfame

- Led cross-functional teams in creating robust web applications with Laravel and SQL Server.
- Delivered end-to-end solutions by integrating front-end and back-end components.
- Presented project progress and features through demos to stakeholders.

Project: BioCloud 3D

- Designed core features of a cloud-based 3D visualization platform.
- Ensured secure and efficient payment processing using Stripe integration.
- Enhanced project delivery through active team collaboration and task management.

EDUCATION

Bachelor of Science in Computer Science

FAST – National University of Computer and Emerging Sciences
